

TEZOS + THE METAVERSE

WELCOME TO THE TEZOSPHERE .

HOW CAN TEZOS INFUSE ITSELF INTO THE ALL CONSUMING, SOON TO BE METAVERSE?

THE TEZOSPHERE

Tezosphere is an RPG style, decentralized interactive virtual platform. Users are able to partake in the learning and application of DeFi, earn virtual tokens such as POAPs, make global connections and build digital communities within the impending metaverse. Further, this game could act as a digital home base.

THE VISION

CYBER HOMEBASE

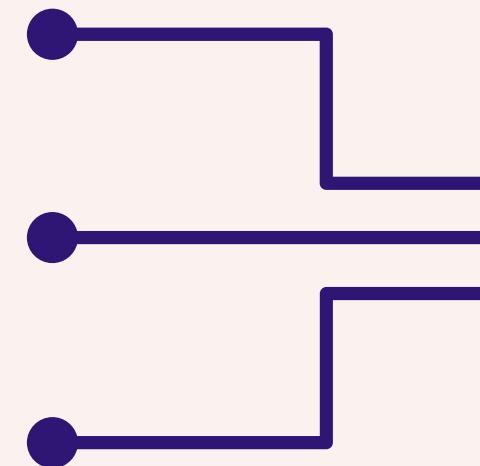

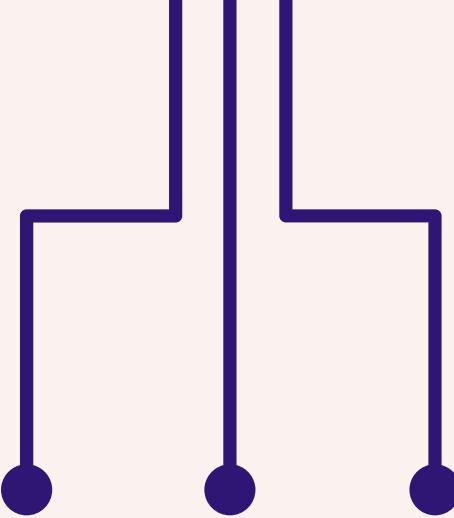

An ideal user would start their day here. Log on and check on any bounties, sales, trades and social memos. The user's other digital spaces can be linked to their profile and be made public or private.

CYBER COMMUNITY

Members of the Tezosphere will come from across the globe, allowing for new connections that will affect the users' digital and physical life. As well, the City Hall community board gives users a place to display digital ads (similar to how people would put ads in the newspaper). City Hall would be available to the entire community.

CYBER ECONOMICS

As the user base grows on, Tezos' evolving blockchain is the perfect place to create an interactive decentralized game that incorporates transferable game economics to the "real world".

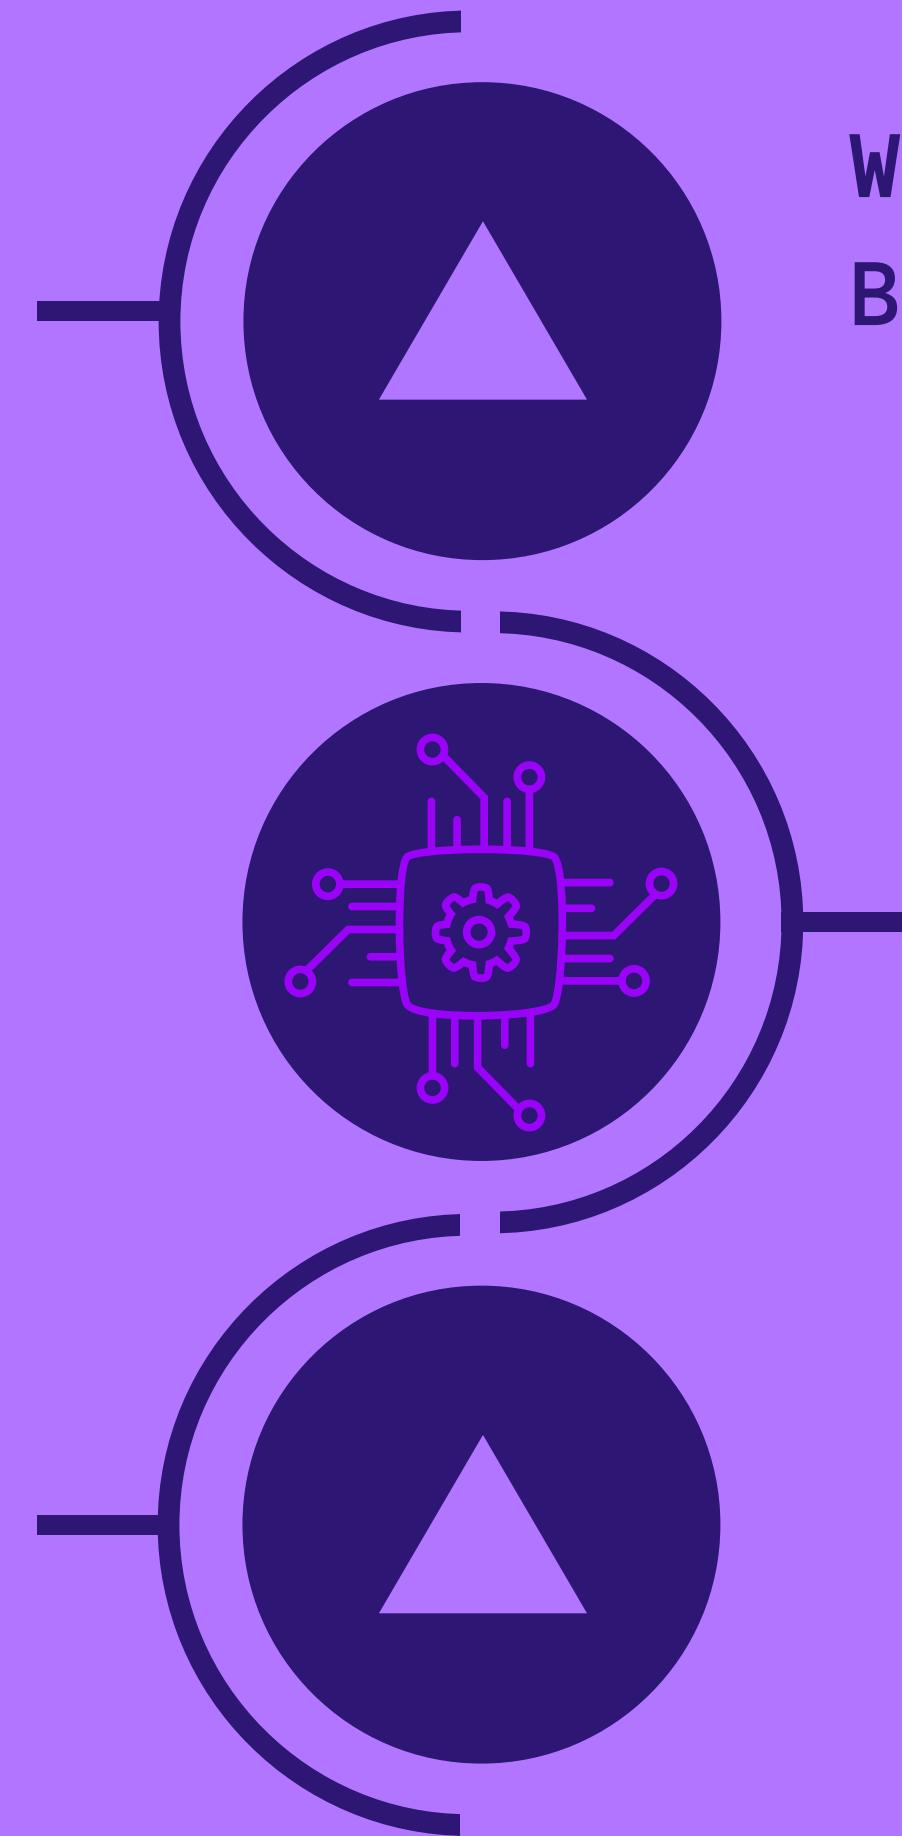

DIGITAL HOME BASE

Since the modernization of the digital world, logging into accounts has become extensive. With a digital home base, users would be able to access and see all their currently active virtual profiles & whereabouts.

THE METAVERSE

The platform itself would have different worlds or "spheres" where players establish themselves. However the structure of the game is adaptability. Adaptability is what makes this virtual world ideal for the magnitude of the coming metaverse.

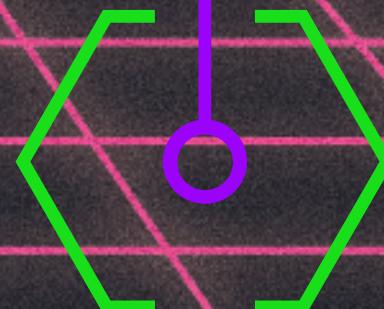

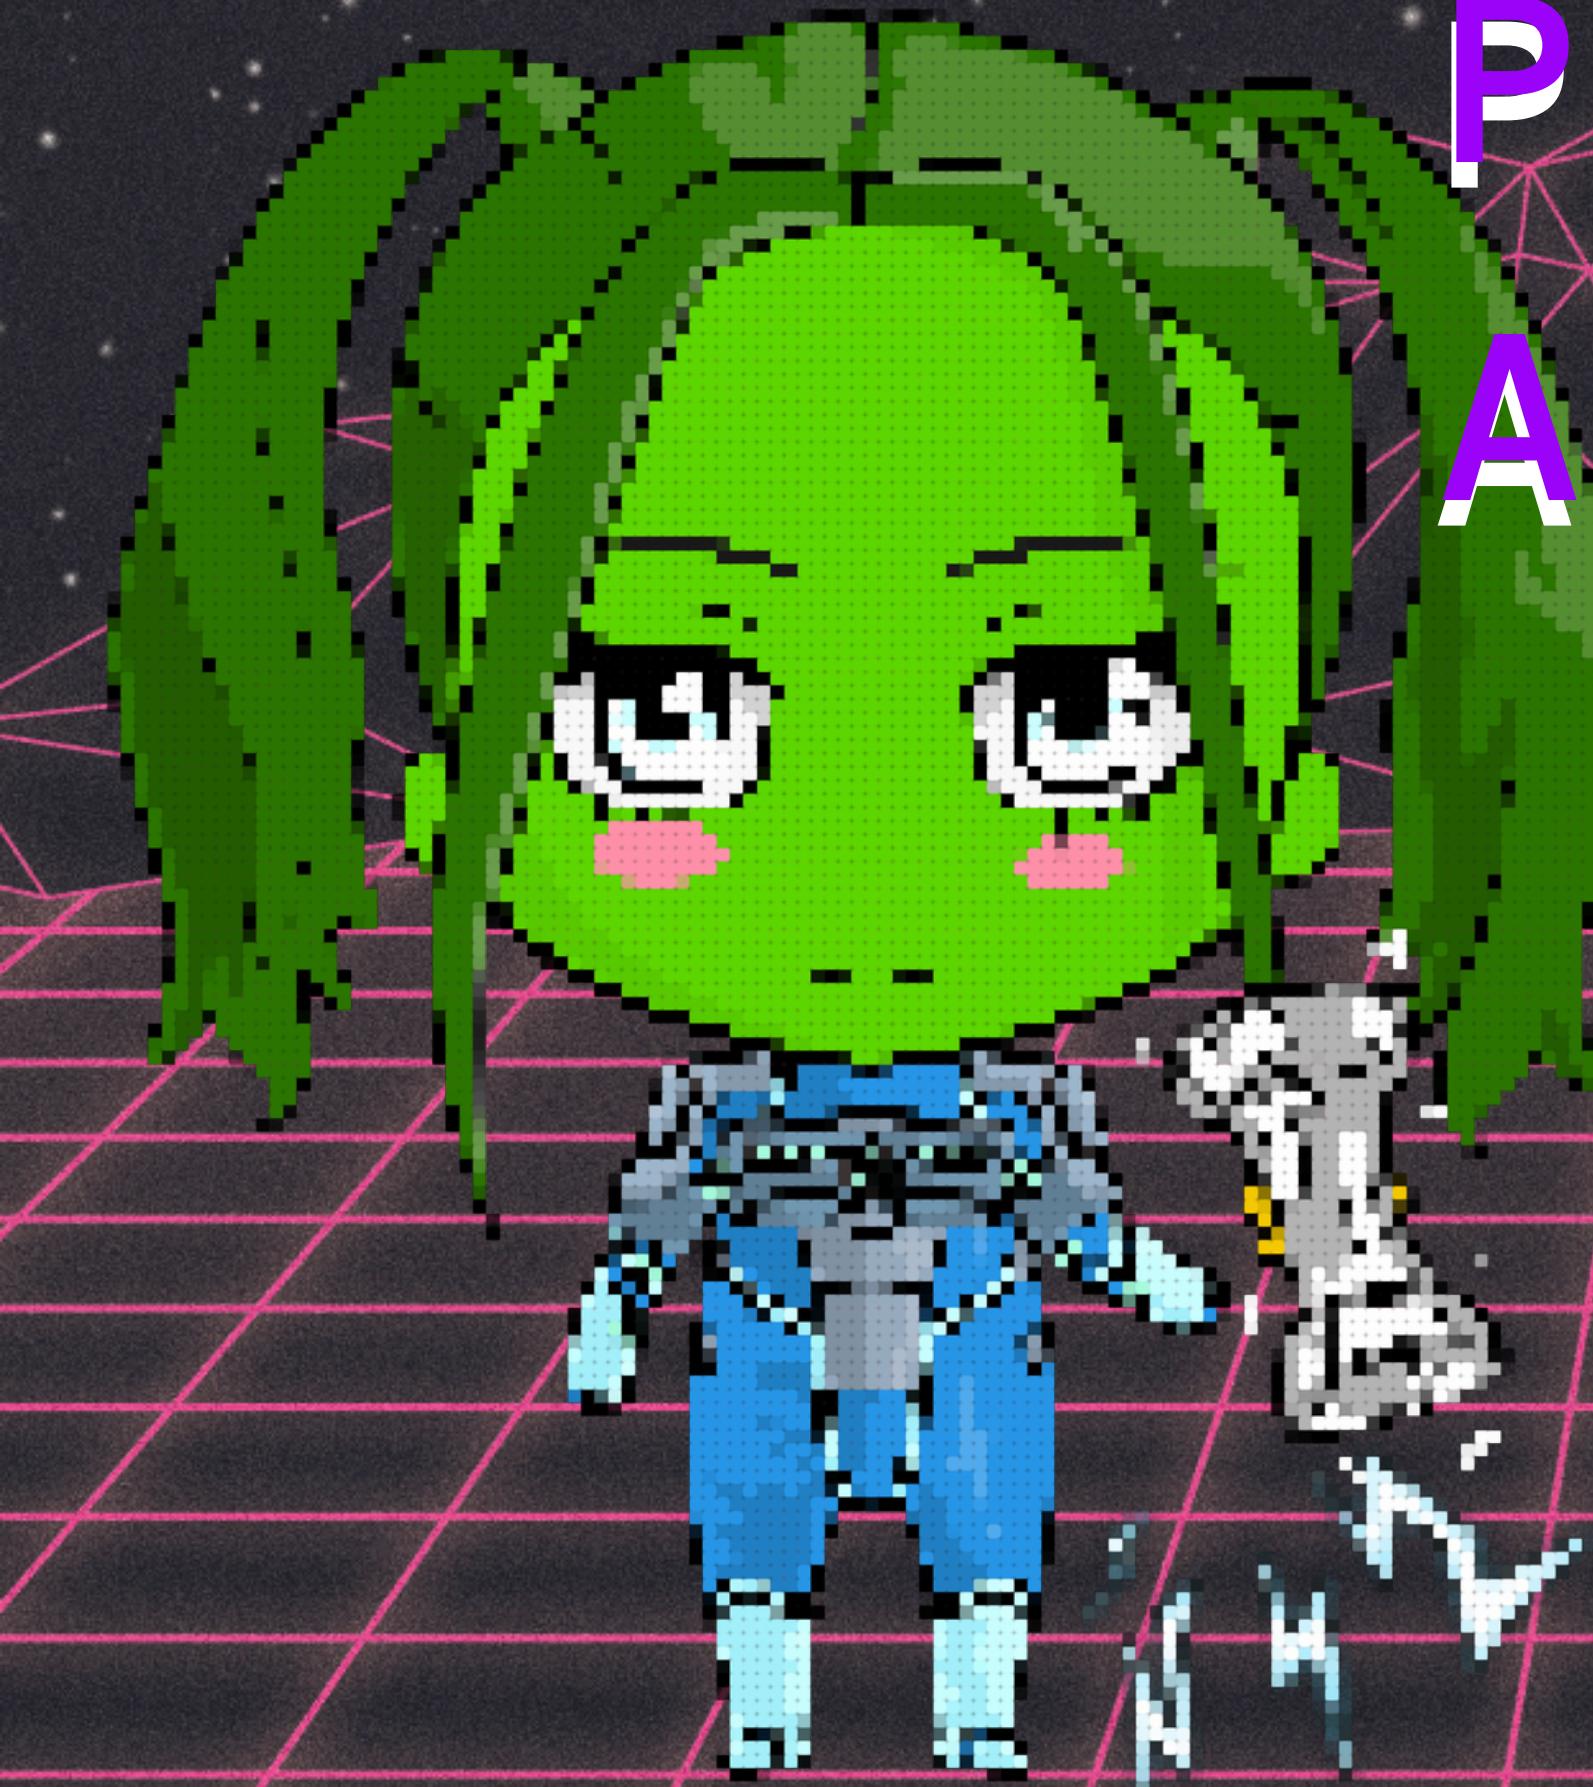

WHAT ARE THE POTENTIAL BENEFITS?

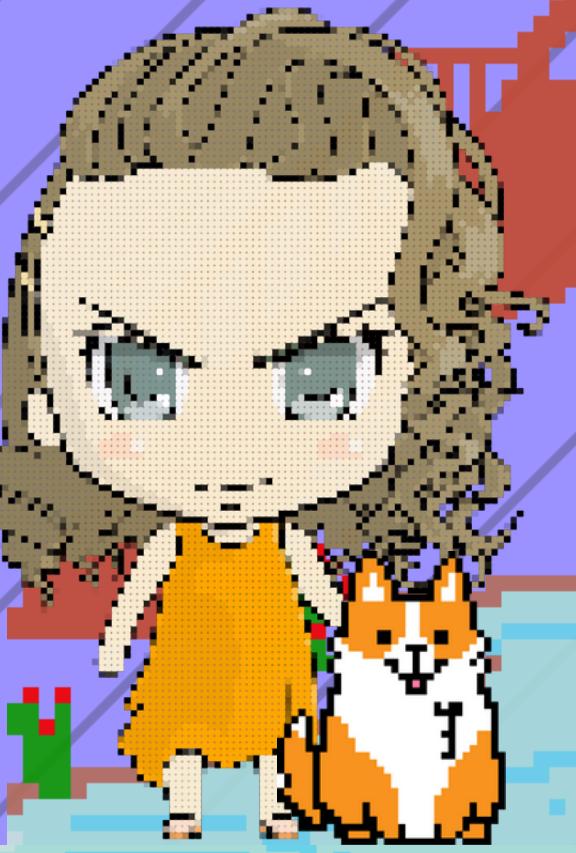

GAME-FI

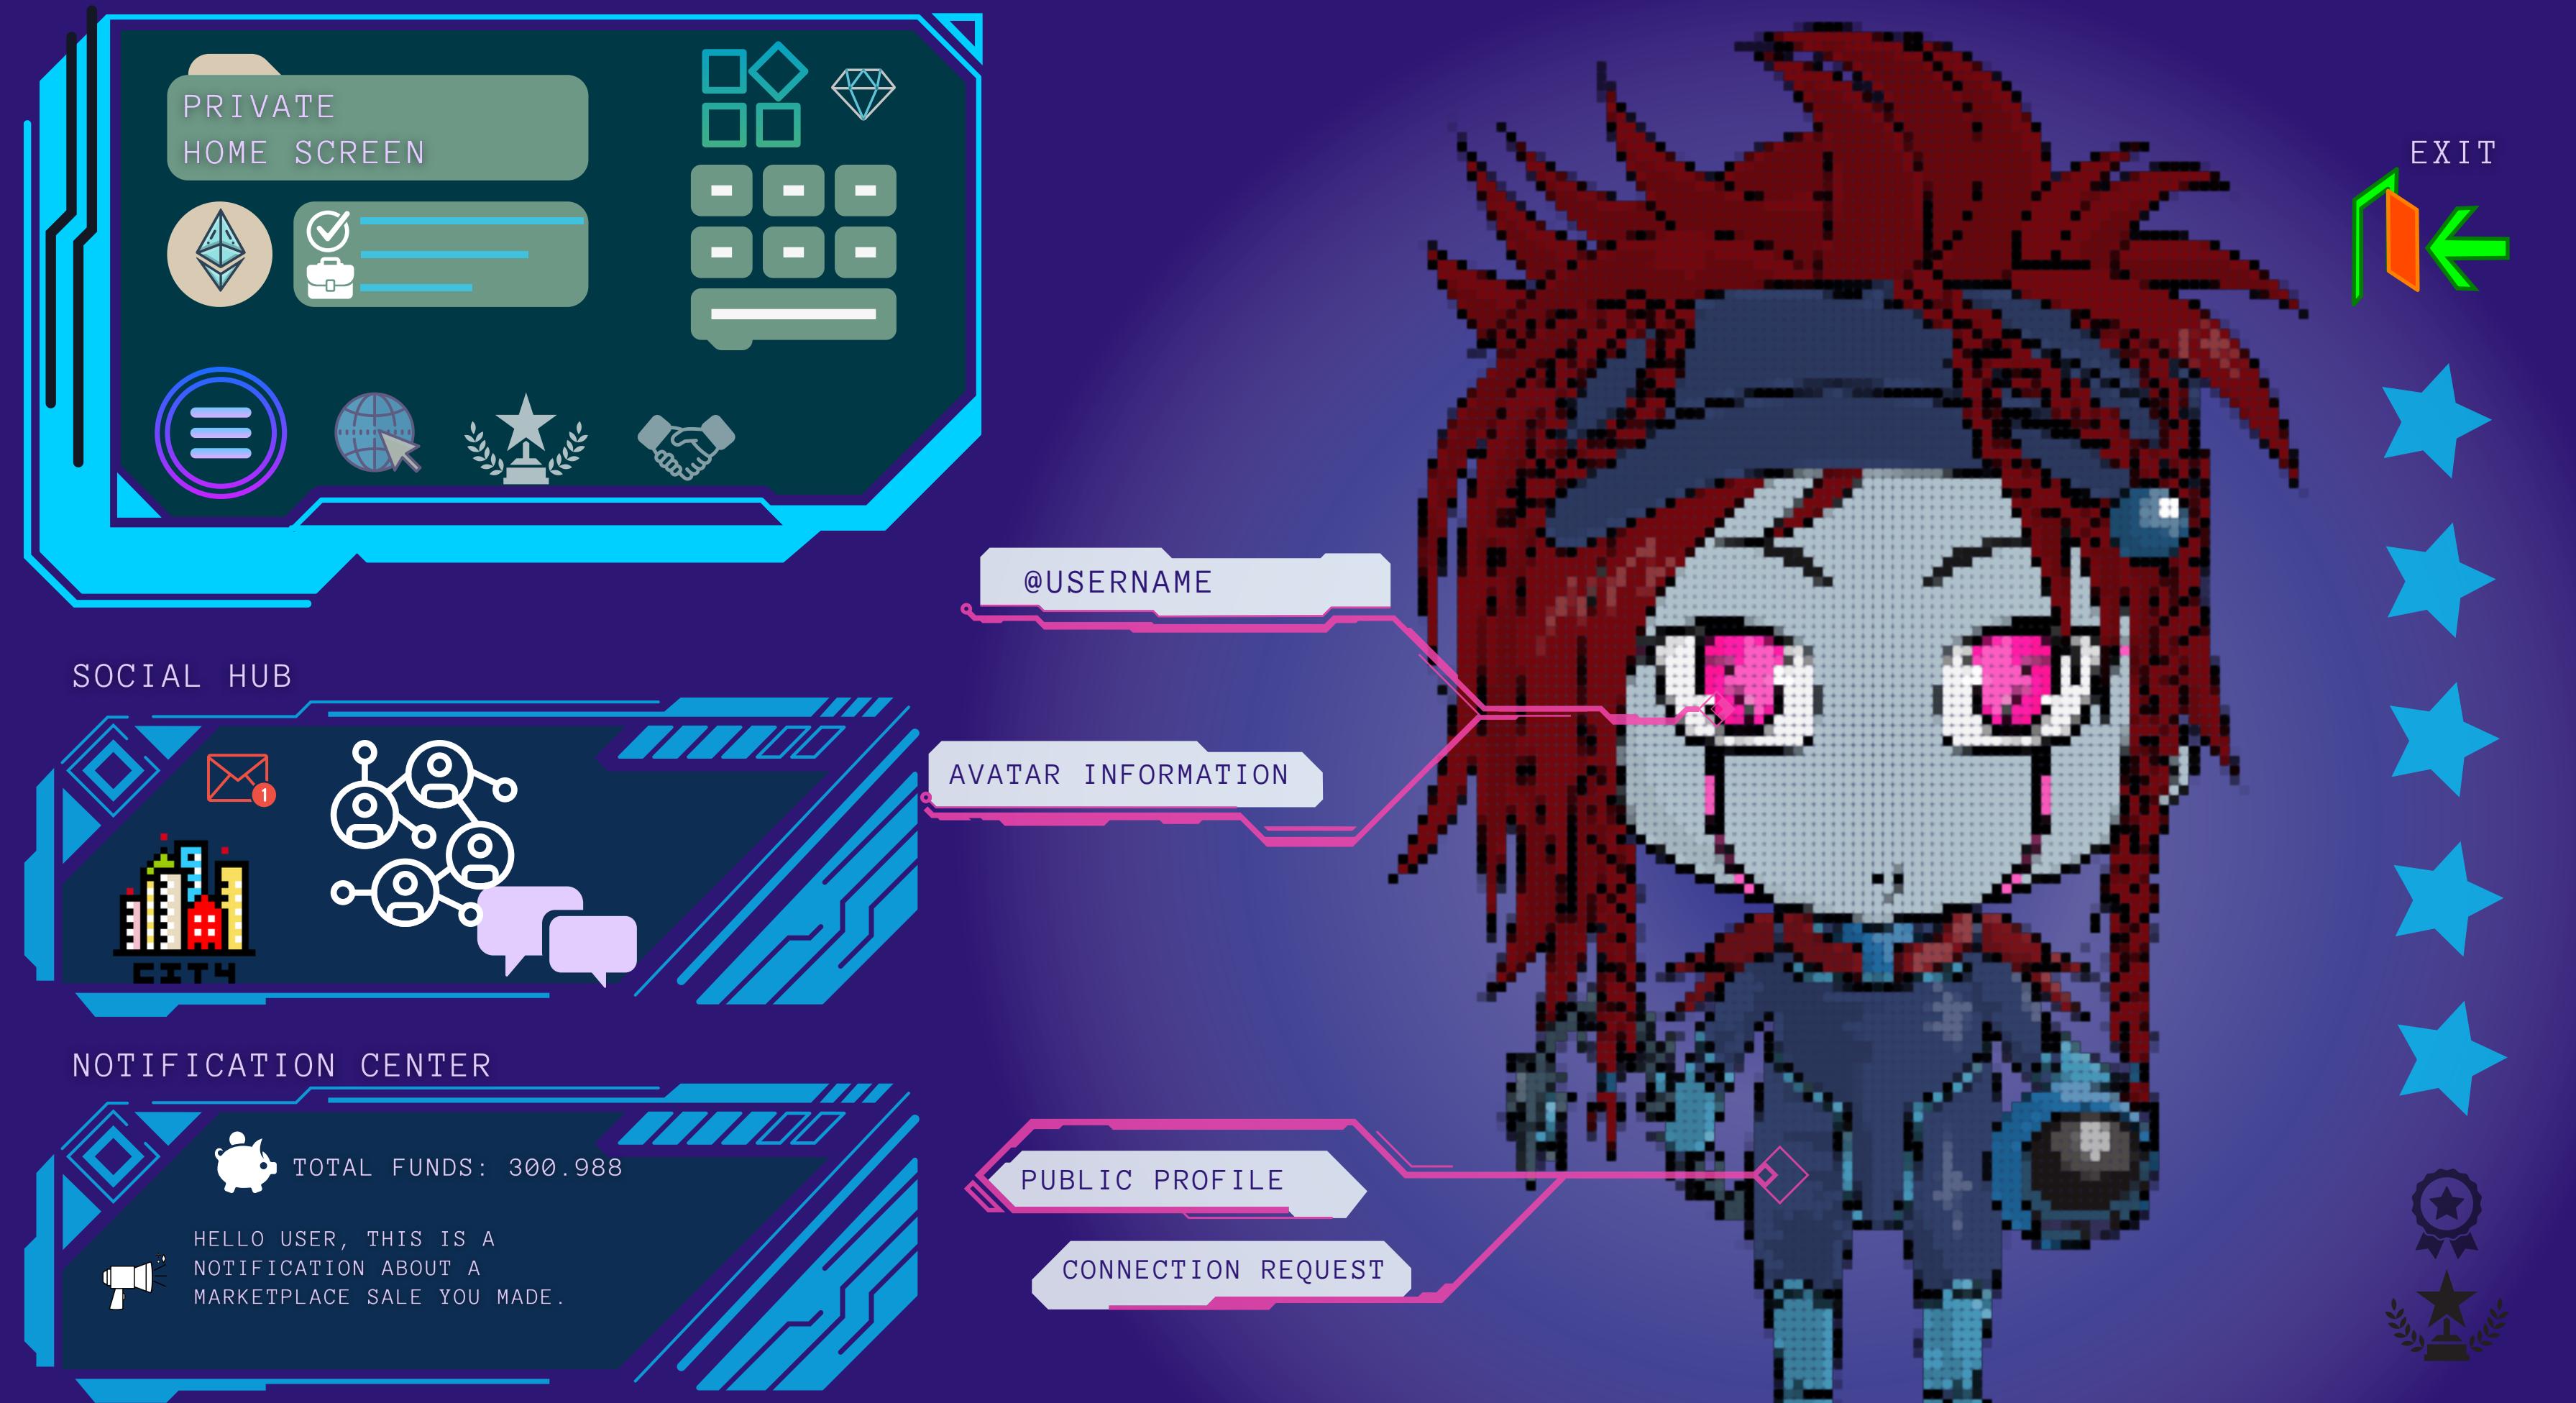

The cyber economy is an outcome of modern digitization which has only just begun and is already a major player affecting the global socio-economic structure. Gaining financial abundance through gaming is a new phenomena which is predicted to grow to such a size that it, too, affects our current understanding of money systems and acceptable careers.

POSSIBLE AVATAR STYLES

WHAT IS THE POTENTIAL IMPACT?

CYBER COMMUNITY

A secure, decentralized community governed society.

DECENTRALIZED GOVERNANCE

All decisions concerning the development of the platform are made by the users via utilization of governance tokens.

FINANCIAL GAIN

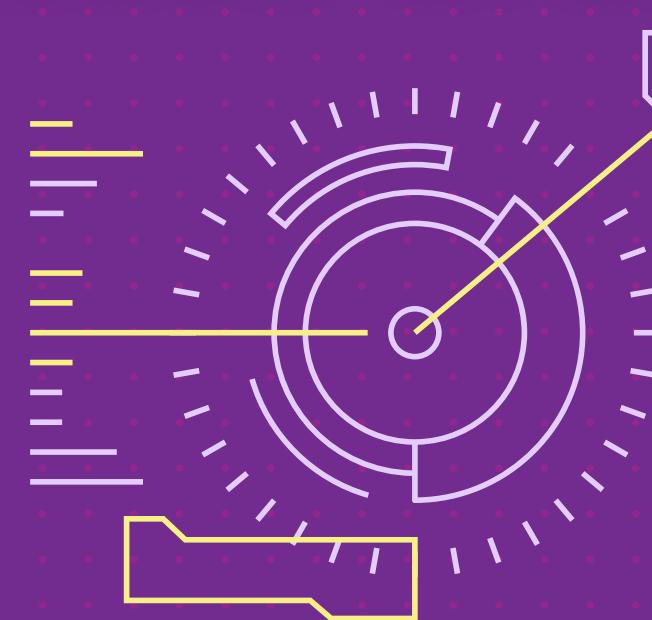

Possibility for exclusive market places such as:

- An NFT market specific to the gamesphere.
- Market place for users to post ads for work.
- Freelance messageboard for web3 hustlers.

DIGITAL HOMEBASE

Tezosphere's city hall, here is where all public POAP events, NFT DROPS, and community governance events & forums would take place.

TECH SPECS

- Social Hub
- Community Bounty Board
- NFT Marketplace
- POAP Marketplace
- Community Marketplace

- Secure
- Self-Sovereignty Protocol
- User selects what data to share.
- POAPS

- Co-op and solo play
- Quests and games
- Dapps created within the Tezosphere
- RPG style allows for infinite game design

Game Design

My suggestion is an RPG game, kind of like The Sims but with very few NPCs, and the universe would be populated with members of the game. I think avatars should be able to take on any form: from a human to an alien or a cryptid.

The game should be a fun escape from the uncertain anxious energy that surrounds the world. It will infuse a bit of whimsy into peoples' lives, expanding horizons of how we perceive our digital presence and allowing for a smooth transition into the metaverse.

Tezosphere: in Short

A personal note: I am not a coder (yet), I am just a very smart lady who understands complex theories and listens to more podcasts than I should (an outcome of the pandemic haha).

Meaning, I have no idea how the back-end would work or the front-end, that would be decided if the game were to be created.

1. Members can use the RPG game as their virtual home base where they would start their digital day, conduct business for real life financial gains; they can add to their digital identity within a secure blockchain and they can utilize the platform to create new connections with individuals who are verified with the use of the new SSI protocol.
2. The platform itself would have different worlds where players would be introduced to the game, and the rest of the game-world would be in the community's hands.
3. The more people on the network, the more financially successful the marketplace within the game becomes, as well as any future projects or branches attached to the base gamiverse (game + universe).
